Introduction

In today's world it is necessary that we have fast delivering food services so that we can have our meal at any time or at situation where there are no restaurants present anywhere around. This project is a boon for these situations and an excellent idea for business start-up. Customers can choose their favourite restaurants and their favourite dishes from options displayed. Special offers features are also available. Time limit to be delivered is displayed during the duration of ordering as well as users can also see the location of parcel being delivered i.e., they will be informed of location of their delivery person. Customers can also compare the price of dishes from various restaurants.

Aim and Objective

The project is aimed at the development of a mobile application and a website so ordering and quick delivering of healthier and delicious food is available at low prices. The main objective of this project is to satisfy the customers using:
- using fast food delivery service
- ordering from their favourite restaurants
- food is available at cheaper costs
- comparison from various other restaurants is possible

Requirements:

1. Hardware Requirements:
- Processor i3
- Hard disk -5 GB
- Memory -1 GB RAM
- Android phone with two prerequisites

1. Marshmallow and Higher
2. Ram 1 GB and Higher

2. Software Requirements:

- Android Studio
- windows 7, 8, 8.1, 10

Scope

This project can be further developed and various new features can be added to improvise the project. For an example: food donation services can be provided which includes the network of hotel, catering services, and food donating NGO's so that food can be delivered to those who are starving and are not able to meet their required nutrition.

Purpose

The reason behind choosing this project is that it is unique and an excellent idea for business start-up. This gives us perfect knowledge for ongoing market competitions as well as comparison of other delivery services and chance to improve our technical and financial stability.

Advantages:

- Fast food delivery services
- Customer can order from favourite restaurants
- Cheaper costs
- Quality services

Disadvantages:

- Internet is necessary.

Applications:

- It can be used in all types of android phones
